

Complete the restoration and replacement process - AFF A400

ONTAP Systems

Doug Thompson, Martin Houser, Thripura Naidu Parangsam October 18, 2021

This PDF was generated from https://docs.netapp.com/us-en/ontap-systems/a400/chassis-replace-complete-system-restore-rma.html on October 26, 2021. Always check docs.netapp.com for the latest.

Table of Contents

C	omplete the restoration and replacement process - AFF A400	1
	Step 1: Verify and set the HA state of the chassis	1
	Step 2: Run diagnostics	1
	Step 3: Switch back aggregates in a two-node MetroCluster configuration	2
	Step 4: Return the failed part to NetApp	3

Complete the restoration and replacement process - AFF A400

Step 1: Verify and set the HA state of the chassis

You must verify the HA state of the chassis, and, if necessary, update the state to match your system configuration.

1. In Maintenance mode, from either controller module, display the HA state of the local controller module and chassis: ha-config show

The HA state should be the same for all components.

- If the displayed system state for the chassis does not match your system configuration:
 - a. Set the HA state for the chassis: ha-config modify chassis HA-state

The value for *HA-state* can be one of the following:

- ha
- mcc
- mcc-2n
- non-ha
- b. Confirm that the setting has changed: ha-config show
- 3. If you have not already done so, recable the rest of your system.
- 4. Reinstall the bezel on the front of the system.

Step 2: Run diagnostics

After you have replaced a component in your system, you should run diagnostic tests on that component.

Your system must be at the LOADER prompt to start diagnostics.

All commands in the diagnostic procedures are issued from the node where the component is being replaced.

1. If the node to be serviced is not at the LOADER prompt, reboot the node: system node halt -node node name

After you issue the command, you should wait until the system stops at the LOADER prompt.

- 2. At the LOADER prompt, access the special drivers specifically designed for system-level diagnostics to function properly: boot diags
- 3. Select Scan System from the displayed menu to enable running the diagnostics tests.
- 4. Select **Test system** from the displayed menu to run diagnostics tests.
- 5. Select the test or series of tests from the various sub-menus.

- 6. Proceed based on the result of the preceding step:
 - If the test failed, correct the failure, and then rerun the test.
 - If the test reported no failures, select Reboot from the menu to reboot the system.

Step 3: Switch back aggregates in a two-node MetroCluster configuration

After you have completed the FRU replacement in a two-node MetroCluster configuration, you can perform the MetroCluster switchback operation. This returns the configuration to its normal operating state, with the sync-source storage virtual machines (SVMs) on the formerly impaired site now active and serving data from the local disk pools.

This task only applies to two-node MetroCluster configurations.

Steps

1. Verify that all nodes are in the enabled state: metrocluster node show

- 2. Verify that resynchronization is complete on all SVMs: metrocluster vserver show
- 3. Verify that any automatic LIF migrations being performed by the healing operations were completed successfully: metrocluster check lif show
- 4. Perform the switchback by using the metrocluster switchback command from any node in the surviving cluster.
- 5. Verify that the switchback operation has completed: metrocluster show

The switchback operation is still running when a cluster is in the waiting-for-switchback state:

The switchback operation is complete when the clusters are in the normal state.:

If a switchback is taking a long time to finish, you can check on the status of in-progress baselines by using the metrocluster config-replication resync-status show command.

6. Reestablish any SnapMirror or SnapVault configurations.

Step 4: Return the failed part to NetApp

After you replace the part, you can return the failed part to NetApp, as described in the RMA instructions shipped with the kit. Contact technical support at NetApp Support, 888-463-8277 (North America), 00-800-44-638277 (Europe), or +800-800-80-800 (Asia/Pacific) if you need the RMA number or additional help with the replacement procedure.
